## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-28 and 52-61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hendricks et al. in view of Pascucci et al.

Hendricks et al. shows all of the limitations of the claims except for specifying a verifying that data is new content/not previously received.

Hendricks et al. shows, figure 1, an advanced set top terminal for cable television delivery systems. The system has an operations center 202 (first storage, host side device, first sending/receiving (S/R) unit). The Cable Headend acts as the retrieval unit, decision unit, reproduction unit and the second S/R. Note that the Cable Headend acts as a distribution center and a network controller. The ability to recognize and store data is inherent in these functions. Supplemental data can be provided when user requests more (intent of user). Communication links allow requests and replies to be sent and received. Different audio quality can be achieved upon request (Figure 21 for CD quality audio option). Hendricks et al. also teach subscriber payments (request for payment).

Referring to FIG. 22, the advanced system of the set top terminal 220 is used to control video tape machines and simplify recording programs using a Guide Record feature.

The VCR will be automatically activated to record the selected program (automatic storage of the data received by said second sending receiving means, only data selected will be recorded, appended supplementary data) The selection choice "Press here to return to cable TV" is an indication user is not willing to make payments.

Pascucci et al. teaches a networked facilities management system where databases are synchronized by use of a time stamp to verify new content. From column 45, lines 40-47, "If the network controller has a new data base as indicated by its own time stamp, it downloads that information, which is some portion of the data base, to the device coming on line on the N2 network. If the network controller does not have a more recent data base than that indicated by the time stamp of the device operating on the N2 network, the network controller assumes that the N2 device has the correct data base." By this method, the system avoids unnecessarily transmitting data.

Based on the teaching of Pascucci et al., it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the Hendricks et al. system to incorporate the synchronizing/verifying means of Pascucci et al. in order to avoid unnecessarily transmitting data.

***Response to Arguments***

Applicant's arguments with respect to all claims have been considered but are moot in view of the new ground(s) of rejection.
